

1. Django is highly popular because it allows users to have a fully made web application just in python, with only one framework
2. Django is used for instagrams full application, National Geographics website, Mozilla's Firefox web browser, Spotify for most backend and analytics, and finally pintrest for their app
- 3a. I would not use Django as it simply needs to have multiple users.
- 3b. I would use Django as it allows me to quickly adjust the page
- 3c. I would use Django since it is a quick application and doesn't need anything extra
- 3d. I would not use Django as React would work better
- 3e. I would not use Django as it has slightly less support
4. Python3 --version -> Python 3.11.5
5. mkvirtualenv achievement2-practice
- 6.pip install django
